COTTON INCORPORATED SUPPLY CHAIN

### **HOME TEXTILES: SHEETS & BEDDING**

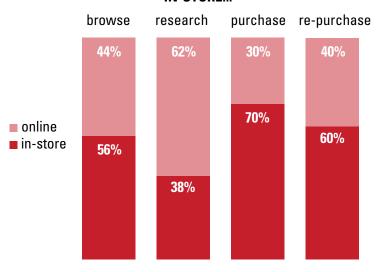

Top-of-bed products, which include sheets and bedding, account for the majority of U.S. home textiles imports on a fiber weight basis<sup>1</sup>. With U.S. home textile spending projected to grow by one-fifth from \$54.5 billion in 2016 to \$66.5 billion in 20302, the top-of-bed market will likely grow at a similar rate. Although the top-of-bed market is still need-based, opportunities exist to encourage consumers to purchase new products through: improved digital assets that inspire consumers to research and browse online; cotton performance innovations that make cotton products more competitive with manmade fibers; and marketing messages that remind consumers why 100% cotton is their fiber of choice.

### **KEY INSIGHTS**

- Leverage all consumer touchpoints to move consumers beyond replenishment and inspire them to purchase new products.
- Explain how top-of-bed products can address consumer interest in comfort, quality, and ease of care to help evolve purchases from need to want.
- · Improve the competitiveness of cotton offerings by utilizing Cotton Incorporated abrasion resistance and moisture management technologies.
- · Find inspiration for cotton-rich, top-of-bed offerings by browsing Cotton Incorporated's FABRICAST™ collections online.

## **SHOPPING HABITS & NEEDS**

Lack of brand loyalty in the top-of-bed market creates opportunities for both established brands and new entrants to develop products that truly meet consumers' primary needs. Most consumers are looking for sheets and bedding that are comfortable, good quality, easy to care for, and sold at a reasonable price. Explaining how products can meet these needs across all shopper touchpoints can help build brand loyalty and sales.

### PERFORMANCE ENHANCEMENTS

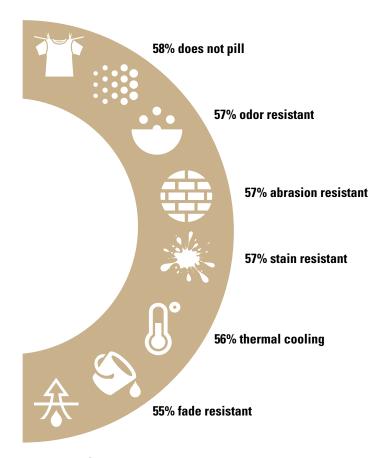

Although top-of-bed offerings with performance technologies remain limited at retail, they have more than tripled over the past four years. The majority of consumers say they are interested in top-of-bed products that help solve care issues common to apparel, such as shrinking, pilling, and stain resistance as well as products that offer typical active performance features such as odor control, abrasion resistance, thermal regulation, and moisture management. More than 3 in 5 consumers would choose cotton sheets and bedding products rather than products made from manmade fibers if the cotton products offered enhanced durability or moisture management functionality. Cotton Incorporated TOUGH COTTON™, TransDRY®, and WICKING WINDOWS™ technologies can help improve the competitiveness of cotton top-of-bed products.

### COTTON OPPORTUNITIES

About 7 in 10 consumers say cotton is their fiber of choice for top-of-bed product categories because they feel cotton is best suited to meet their primary needs for comfort and quality as well as needs for reliability, sustainability, and an overall good nights' sleep. Beyond performance technologies, fabric construction as well as unique dyeing and finishing techniques can also make cotton sheets and bedding products more competitive with manmade fibers. The majority of consumers are interested in fabric concepts that use U.S. cotton, prints and patterns to mask wrinkles, and minimal processing. These concepts, along with many others can be utilized by the industry through Cotton Incorporated's FABRICAST<sup>TM</sup> collections.

**About 7 in 10 consumers prefer their sheets (74%)** & bedding (69%) products to be cotton-rich.
